DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Jewell et al. (5,500,540). Jewell discloses a light emitting semiconductor package including: a) a semiconductor chip (Figs.1-2 el.12) having a top surface and a bottom surface and having at least one light emitting device (el.14) formed in the chip which emits electromagnetic radiation (el.16) at one or more wavelengths from the top surface; b) a first hollow cap (el.52) having a central portion and a first perimeter wall extending from the perimeter edge of the central portion with the free edge of the first perimeter wall bonded to the top surface to provide a first cavity and which, in plan view, overlays part or all of at least one light emitting device (Fig.2), said central portion including at least one region which is at least substantially transparent or translucent to electromagnetic radiation at said one or more wavelengths (col.6 lines 4-8); and wherein the first cap has been bonded to the semiconductor chip at the wafer stage prior to separation of the wafer into individual packages (Fig.2). Jewell also discloses at least one region that refracts (el.30; col.8 lines 23-28) said electromagnetic radiation emitted by said at least one device; wherein the cap further includes at least one attachment means for

attaching an electromagnetic radiation transmitting cable or fiber to the cap, whereby at least some electromagnetic radiation emitted from the at least one device passes through said at least one region into the cable or fiber (Fig.5 el.94; col.8 lines 23-28); wherein the at least one attachment means includes a second perimeter wall extending from the periphery of the central portion away from the first perimeter wall (Fig.5); and wherein the at least one attachment means includes at least one recess in the central portion (Fig.2).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jewell et al. as applied to claims 1-5 above, and further in view of Bloom (5,805,757). Jewell does not disclose a second cap bonded to the bottom surface of the chip. However, Bloom discloses a second cap bonded to the bottom surface of the chip, said second cap, in plan view, overlaying part or all of the at least one device (Fig.9A; col.9 lines 12-17). Therefore, it would have been obvious to a person skilled in the art at the time of the invention to use the second cap of Bloom with the light emitting semiconductor package of Jewell in order to provide support for the optical device (col.9 lines 21-24).
